DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

- 2. Claims 2-9 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
 - Regarding to claim 2, "wherein control signaling" is not disclosed in claim 1, which claim 2 depended on.
 - Regarding to claim 4, "wherein uninterrupted transport" is not discloses in claim2, which claim 4 depended on.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the

Application/Control Number: 09/973,135 Page 3

Art Unit: 2666

reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

4. Claims 1, and 10-13 are rejected under 35 U.S.C. 102(e) as being anticipated by Chin et al. (U.S. Patent No. 6490298B1).

- With respect to claim 1, Chin teaches a communication method for use in a dynamic network comprising the steps of:

allocating network resources to a data stream based upon precedence levels of other data streams desiring the same resources or already utilizing the same resources (e.g. Fig. 3A teaches sources A-Z are assigned to Layers to communication channel).

- With respect to claim 10, Chin discloses wherein network resource allocation is based upon link bandwidth (col. 4, lines 4-7).
- With respect to claims 11 and 13, Chin teaches wherein network resource allocation is based upon priority position in a queue (col. 6, lines 35-36).
- With respect to claim 12, Chin also teaches wherein network resource allocation is based upon priority position in a central processing unit (col. 6, lines 11-15).

Conclusion

- 5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
 - Kavner (U.S. Patent No. 6430607 B1) discloses system and method for performing remote requests with an on-line service network.
